

Data Product Catalog Usage

Introduction

The data product catalog knows what data store hold what kind of data products (data product types).

Using the UI

<https://swisshds.u.c.bag.admin.ch/catalog/>

List Data Product Types

This list is stored under the Title "registrierte Datenprodukte".

This view allows to add new Data Product Types. Such a type is identified by its profile URL. Each entry also has a human readable name. It is called "Datenprodukt".

Via the pencil symbol, you can edit each line.

List of Data Stores with their profile URLs

This list is stored under the Title "Datenlieferanten".

To add a new entry, click on "Datenlieferant hinzufügen". You add there the URL of the data store (the url of the gateway, to be exact) and the list of registered data product types.

Via the pencil symbol, you can edit each line.
