

HAOD Usage

Introduction

This service manages the health care actors (persons such as doctors, administrators, nurses and later machines) that can use the HDS. It also store attributes for these health care actors.

For simplicity, we currently also store patients here, we will move them out later.

UI Usage

The UI is here: <https://swisshds.u.c.bag.admin.ch/haod/>

Adding a new Health Care Actor (Doctor, Pharmacist, Admin, Nurse, ...)

For this, you click on "GFP hinzufügen" (GFP stands for Gesundheitsfachperson). Remark: for the moment we put all Users in HAOD. We will move out patients in a separate directory.

Important fields:

- Idp Name: This links to the IdP you use (the issuer URL as also configured in the Authorization service)
- IdP Id: The Id this IdP gives to this Health Care Actor. This id is in the AuthN Token of the IdP.
- HDS Id: the Id of the person (only needed for patients). This id is then as patient Id in FHIR bundle documents.
- GLN Id: The Id of the GFP. **Needed to make an actor a GFP** (simplified for now).

Illustration of the UI:

We show here:

- the Issuer (shown as IDP),
- some IdP IdS that the AuthN Token uses
- a GLN Id (identifier of a doctor)
- HDS Id (identifier of a patient)
